THE IMPORTANCE OF DETAIL

The use of high quality materials is the basis of the philosophy behind the design of our furniture: it is designed to be strong, functional and practical.

All our benches and accessories are modular elements designed to meet the constantly evolving needs of modern laboratories, are EN 13150 compliant and certified by Bureau Veritas, and tested by CATAS® as well as complying with their ISO 9001:2015 certified design and production system.

ASEM® furniture can be combined with a wide range of equipment in order to meet our customers' more specific demands as well as guaranteeing maximum comfort while working.

ASEM® also offers an interesting spectrum of colours in order to personalise the furniture such as EN 16121 SEVERA certified units and cabinets so that you can find your way around the laboratory more easily, draw attention to the company colours or simply appeal to your customer's tastes.

Our aim is to design a more innovative, safer work environment that guarantees a high level of performance during day-to-day work.

HOW TO DESIGN YOUR LABORATORY

To furnish your laboratory all you have to do is:

- 1** Take measurements of the room;
- 2** Indicate the position of the windows, doors and power sockets and discharges on the layout;
- 3** Indicate if there are any skirting boards, columns and coving present and their dimensions;
- 4** Select the worktop and type of base according to your needs;
- 5** Indicate the underbench units you require;
- 6** Personalise with accessories: taps, power sockets, panels.

**THE MODULAR CONCEPT OF OUR FURNITURE
MAKES IT EASY TO ADAPT TO THE NEEDS OF
ANY SPACE**

ETA_SERIES

MAIN COMPONENTS

- METAL FRAME WITH 60x30 mm C-FRAME STEEL TUBE LEGS
- SERVICE COVER PANELS
- WORKTOP
- REAGENT SHELVING

WITH THE **ETA VERSION SERVICES** ARE EITHER LOCATED ON A **PREDRILLED BAR** AT **WORKTOP LEVEL** OR ON A **VERTICAL PANEL**

Our benches come in single side-by-side **600, 900, 1200, 1500** and **1800 mm base modules** or in configurations with a single central leg which makes alignment easier.

The bases are coated with epoxy acid-resistant resin in **RAL 9010 Pure White**.

The wall benches have **standard depths** of **660** or **810 mm** and the **central benches depths** of **1260** and **1560 mm**.

ETA_SERIES

ETA_P

- 1 Glass fronted storage unit
- 2 Reagent shelving
- 3 EE turret
- 4 Water tap
- 5 Tap for gas - nitrogen - vacuum, etc.
- 6 Worktop
- 7 Side infill panels
- 8 Service cover panel
- 9 ETA base
- 10 Underbench unit
- 11 Columns

WALL BENCH

ETA_C

- 1** Reagent shelving
- 2** Mixer tap
- 3** EE turret
- 4** Water tap
- 5** Tap for gas - nitrogen - vacuum, etc.
- 6** Worktop
- 7** Side infill panels
- 8** Service cover panel
- 9** ETA base
- 10** Underbench unit
- 11** Acrylic glass protective panels
- 12** Columns

CENTRAL BENCH

USER FRIENDLY

The ASEM® service outlet panel (available as an option) is ideal for water, electrical and technical gas distribution. Ease of use and accessibility is the basis of achieving results by optimising space and time.

**MODULARITY
AND SAFETY.
THE VERTICAL PANEL
FOR WALL-MOUNTED
SERVICES.
NOT ONLY PRACTICAL
BUT ALSO SAFE.**

ETA_SERIES

ETA_PLAIN

METAL MODULARITY

N E W

C-frame leg support structure in pickled steel tube sprayed with epoxy resin powder in RAL 9010 Pure White (other colours available on request) and then placed in a heat tunnel at 180 °C.
Height-adjustable steel feet coated in acid-resistant plastic.

Worktop can be personalised to suit your requirements.
The water and electrical services can be installed directly on the worktop on request.

Available in **widths** of **60, 90, 120, 150, 180** and with a **standard depth** of **750** or **reduced depth** of **600**, it also comes in **heights** of **770** or **900**.

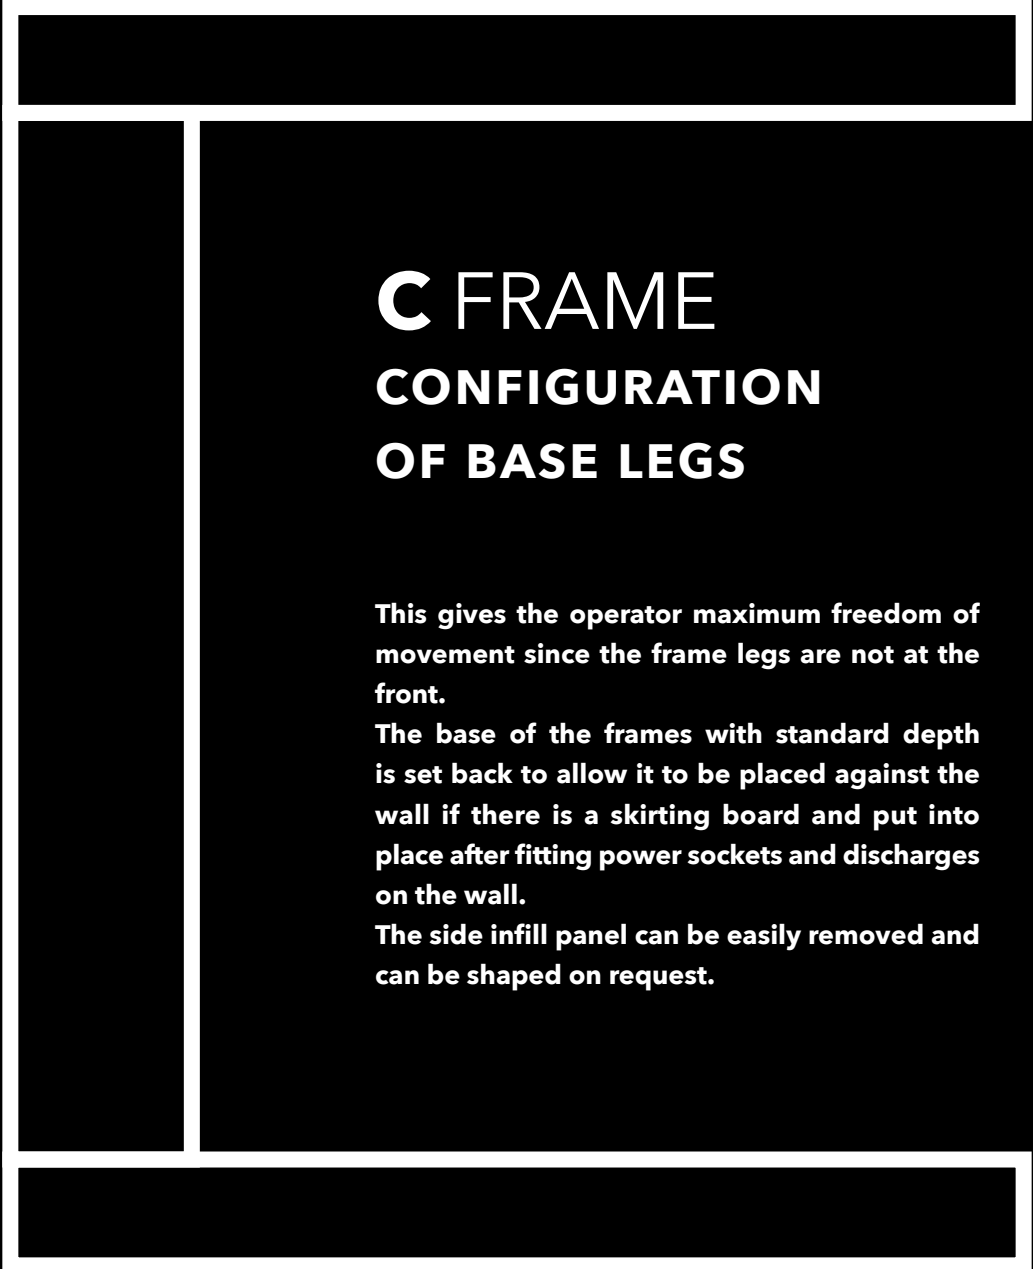

IDEAL FOR LABORATORY AND OFFICE TABLES OR DESKS, ITS WIDE RANGE OF DIMENSIONS MAKE IT PERFECT FOR ANY ROOM.

ETA_PLAIN SINGLE BASE

C FRAME CONFIGURATION OF BASE LEGS

This gives the operator maximum freedom of movement since the frame legs are not at the front.

The base of the frames with standard depth is set back to allow it to be placed against the wall if there is a skirting board and put into place after fitting power sockets and discharges on the wall.

The side infill panel can be easily removed and can be shaped on request.

It is made with 2 mm thick steel tubes with 60x30 and 60x60 sections.

The protective coating on the metal structures involves pickling and hot phosphating and the application of electrostatically applied epoxy resin powder based paint (100±10 micron thick) in RAL 9010 Pure White (other colours available on request) and then dried in a heat tunnel at 180 °C.

Height-adjustable steel feet coated in acid-resistant plastic.

The bases of the elements with standard 60, 90, 120, 150 and 180 cm modularity have 2 legs with a 60x30 mm section.

The wall benches with a single standard modular base can also be shipped premounted.

Larger sized benches can be supplied with single independent frames of the same dimensions or with 60x30 mm external legs and 60x60 mm intermediate legs.

SINGLE BASE

The metal bases are made of 60x30 and 30x30 mm section steel tubes and are constructed as independent units which are modular and can be mechanically connected; the tight machining tolerances guarantee that the individual elements can be interchanged or replaced.

EXCEPTIONAL STURDINESS WHICH CAN GUARANTEE A UNIFORMLY DISTRIBUTED LOAD OF OVER 200 KG/M²

ETA_SERIES

SERVICES AT WORKTOP LEVEL

Service outlet panel with 28 mm diameter holes and removable plastic caps.

The protective coating on the metal structures involves pickling and hot phosphating and the application of electrostatically applied epoxy resin powder based paint (100±10 micron thick) in RAL 9010 Pure White (other colours available on request) and then dried in a heat tunnel at 180 °C.

SUPPLY AND DISCHARGE FITTINGS

ETA_SERIES

PIPE FITTINGS

This page contains recommendations on how to fit the connections in your laboratory.

The supply pipes can be made of "Mannesmann" galvanised drawn steel and/or stainless steel depending on the liquid. The discharge pipes can be in Geberit or Nirlene polyethylene.

IP 55-rated waterproof electrical box with G3 cables with 2.5 mm² cross section for power sockets and single-phase control board.

Our technicians are qualified to carry out the system, electrical, hydraulic, discharge and suction connections and issue system compliance certification in accordance with Ministerial Decree no. 37/08.

Discharges for large tanks
500 x 400 x 300 (H) mm

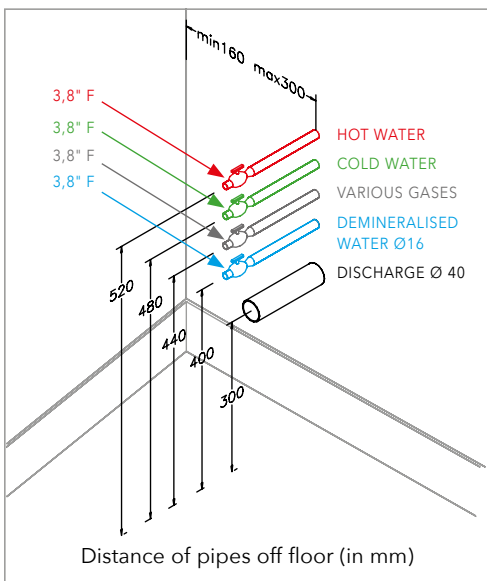

To calculate this value, subtract 140 mm from the dimensions of the bench or wash unit

Discharges for tanks
150 x 300 x 200 (H) mm

To calculate this value, subtract 140 mm from the dimensions of the bench or wash unit

REAGENT SHELVING

Structure made of steel tubes with a protective coating that involves pickling and hot phosphating and the application of electrostatically applied epoxy resin powder based paint (100±10 micron thick) in RAL 9010 Pure White (other colours available on request) and then dried in a heat tunnel at 180 °C.

Tray shelves to contain any spills, raised edges for objects and bottles.

Adjustable height with fittings for easy alignment, every 35 mm, 740 mm high columns.

Laminate or glass shelves and support brackets of different heights are available on request.

WORKTOPS

ALL OUR BENCHES AND TABLES MUST HAVE A WORKTOP.

ALL MATERIALS ARE CLOSELY LINKED TO THE TYPE OF PROCESS AND APPLICATION YOU REQUIRE.

THE WIDE RANGE OF MATERIALS AND SIZES THAT ASEM OFFERS GIVES YOU THE MAXIMUM PERFORMANCE AGAINST HEAT, CHEMICAL ATTACKS AND DIRT.

FOR SPECIAL APPLICATIONS WE CAN OFFER SHELVES WITH TRAYS IN VARIOUS SIZES AND MATERIALS WITH RAISED EDGES TO PREVENT THE SPILLAGE OF LIQUIDS.

MONOLITHIC STONEWARE

Consisting of a large slab with 4 raised edges, a single body without seams or joints. It is made by pressing a mixture of clay, pure quartz, kaolin, feldspathic fluxes and other natural products and baked once at 1300 °C which makes it extremely strong.

It is then combined with an anti-reflective cold enamelling process in GREY which gives the product its excellent chemical resistance as well as its aesthetic qualities.

After baking, **it has a perfectly smooth, even surface which can be easily washed and decontaminated and is also highly resistant to chemicals, solvents and heat and mechanical stresses.**

Resistant to acids, alkalis, salts and solvents in all concentrations but not resistant to hydrofluoric acid.

The monolithic stoneware worktops have high mechanical resistance and good thermal shock resistance and are non-flammable. Characteristics comply with DIN 12916 standards.

Special characteristics of the monolithic stoneware worktop are that: **it is self-supporting; has no joints; has high chemical inertia; is easy to replace; is easy to clean, decontaminate and disinfect.**

Dimensions: 600 or 750 mm deep,
28-30 mm thick

GRESLAM 3

Worktop consisting of a slab of 3 mm thick stoneware which is light grey in colour and structurally reinforced with glass fibre matting.

Perfectly smooth surface with high chemical resistance, resistant to acids, alkalis, solvents, disinfectants and detergents (except for hydrofluoric acid).

The surface is compatible with food products and it does not allow mildew, bacteria or fungus to develop.

Excellent resistance to mechanical wear, scratches and abrasions.

Resistant to fire and high temperatures, in the event of a fire, it does not emit any smoke or toxic substances.

It is a product of natural origin, does not pollute the environment and can be ground and fully recycled in other production processes.

It is supported by a waterproof chipboard panel, coated on both sides with F1 fireproof plastic melamine laminate.

Raised grey PVC edge to contain any spills.

Rounded edge in ABS, 3 mm thick

Dimensions: 600 or 750 mm deep,
30/38 mm thick

WORKTOPS

ACRYLIC RESIN

Worktop with raised edge to contain any spills.

Composite product consisting of acrylic resin and mineral fillers.

A slab with built-in edges, integral 6 mm thick material with built-in side edges, a material with uniform thickness which is particularly versatile with excellent aesthetic qualities.

Particularly long lasting and versatile, ideal for technical use.

High resistance to impact, wear and stresses.

Excellent resistance to stains, UV rays, most acids and surface scratches.

Standard colour is light grey and on request it is available in a wide range of colours and veining.

Solid material that is not subject to delamination.

On request, worktops can be made with invisible joints and seem to have been elegantly carved from one single block.

Since it is a non-porous material, it prevents the formation of mildew and bacteria.

It is environmentally friendly, non-toxic, inert and hypoallergenic.

It is fire-resistant and does not produce toxic fumes.

It is supported by a waterproof chipboard panel, coated on both sides with F1 fireproof plastic melamine laminate.

Dimensions: 600 or 750 mm deep,
38 mm thick

PORCELAIN ENAMELLED STEEL

Porcelain enamelled and vitrified steel worktop with 4 moulded anti-overflow edges, made from 10/10 thick special decarbonised sheet steel.

The porcelain enamelling is done using class AA acid-resistant enamels in compliance with PEI (Porcelain Enamel Institute of Washington) S-100/65 rules (ISO 2722) and subject to double baking in an oven at 820 °C with a RAL 9010 finish.

The enamelling process provides excellent resistance to all common chemicals.

Oils, acids, iodine and various types of stains can be removed using normal cleaning products.

Solvents and abrasive powders do not penetrate, do not scratch and do not damage the surface.

Inner support which reinforces and absorbs sound made of high pressure injected polyurethane.

Back overlaying in hot-galvanized sheet steel.

Dimensions: 600 or 750 mm deep,
45 mm thick

STAINLESS STEEL

Worktop with 4 anti-overflow edges in AISI 316 18/10 stainless steel with a perfectly smooth surface and no seams.

It is obtained through pressing and electric welding in an inert gas atmosphere which guarantees a complete lack of porosity (ARGON process).

The upper surface of the worktop is satin-finished or machined using the Scotchbrite procedure which produces a micro-roughness which is similar to mirror polishing and is ideal for avoiding the formation of bacteria or the harshness of chemicals.

Specifications on the resistance to corrosion of stainless steel can be provided on request.

The sheet metal used to make the worktops complies with the regulations UNI: 6900-71; 3992; 7500; 7660; 8317; and the criteria listed in the American Iron and Steel Institute (AISI) manual.

The lower support that the stainless steel sheet is fixed to is made from fire-resistant chipboard with edge shimming.

Dimensions: 600 or 750 mm deep,
38 mm thick

POLYPROPYLENE

Worktop with 4 edges to contain any spills, injection moulded. 10 mm thick, with lower support in fire-resistant chipboard which reinforces and absorbs sound.

Excellent chemical resistance to acids and alkalis, not suitable for use with very harsh solvents, suitable for temperatures up to 140 °C.

Good mechanical resistance for easier shock absorption.

Dimensions:
750 deep, 38 mm thick

GLASS + LAMINATE

Worktop in 6 mm thick tempered glass which is perfectly smooth and practically chemically and biologically inert (not suitable for use with HF).

It is supported by a waterproof chipboard panel, coated on both sides with fireproof plastic melamine laminate. Rounded shock-resistant edge in ABS, grey, 3 mm thick.

On request, it can be supplied with a raised grey PVC edge to contain any spills.

Dimensions: 600 or 750 mm deep,
31 mm thick

WORKTOPS

HPL LAMINATE

Load-bearing panel, consisting of thermosetting resins evenly reinforced with wood-based fibres, manufactured at a high temperature and pressure.

The decorated surface is obtained using patented technology.

This technology guarantees the non-porosity of the surface which prevents the growth of bacteria, mildew and microorganisms.

Excellent resistance to numerous harsh chemicals normally used in chemical, microbiological and teaching laboratories. Test sheets can be supplied on request.

The surface has excellent wear resistance and a solid, long lasting structure that remains attractive for years.

Ideal for flexible and dynamic environments, it can be used to quickly transform the design of your laboratory.

This material is extremely easy to adapt to the specific needs of a laboratory.

You can add sinks, drill holes and add other fittings.

Once installed, it can be easily adapted to new work requirements.

New cuts can be made and new taps, sinks or other equipment fitted without compromising its exceptional performance or aesthetic qualities.

It is a sustainable, environmentally friendly product. A method is used to transform soft wood from certified forests into an attractive, lasting, resistant material. It is a sustainable solution for worktops in laboratories now and in the future.

Standard colour is light grey and on request it is available in a wide range of colours.

Dimensions: 600 or 750 mm deep, 16 mm thick

PLASTIC LAMINATE

Made with a waterproof chipboard support, coated on both sides with class 1 fire-retardant melamine plastic laminate with a scratch-resistant quartz finish consisting of phenolic resin-impregnated kraft paper sheets, a decorative LIGHT GREY top layer impregnated with melamine resin, subjected to the combined action of pressure (90 kg/cm²) and heat (150 °C) in special presses where polycondensation of the resins takes place.

The formaldehyde content complies with the EN120 class 1 standards.

The surface offers good resistance to weak acids and bases.

Rounded shock-resistant edge in ABS, 3 mm thick.

**Dimensions: 600 or 750 mm deep,
30 mm thick for laboratory benches
or 30 for tables and desks**

EPOXY RESIN

Worktop with or without raised edges to contain any spills.

Designed to meet the needs for resistance, safety, functionality and design required in chemical laboratories.

Composite insert material consisting of silicates, epoxy resin and pigments.

Of an even thickness, it offers versatile design, aesthetic quality, functionality and durability.

Excellent resistance to water, humidity and steam.

Self-supporting with good physical and mechanical properties.

Resistant to stains, UV rays and most acids (not suitable for use with hydrofluoric acid and concentrated sulphuric acid), it has been subjected to specific tests and the results of these tests are available on request.

Standard colour is BLACK (on request it is available in LIGHT GREY or other colours).

It is solid material that is not subject to delamination.

Non-porous, mould and bacteria cannot settle.

Inert, non-toxic, hypoallergenic and self-extinguishing.

Can be used with tanks.

**Dimensions:
standard 750, 1200, 1500, 1800 mm
600 or 750 mm deep
19/25 mm deep**

WASH UNITS

Simplifying the quality of work and optimising the processes used is an ambitious aim.

With our wash units you can also find the best solution for your needs and choose whether to use the taps on the worktop or on the front panel.

Ergonomics and intuitive checks make everything you do easier.

ETA_SERIES

BASE WASH UNITS

ETA_SERIES

The WASH UNIT consists of:

MODULAR METAL BASE

C-frame leg support structure in pickled steel tube sprayed with epoxy resin powder and then placed in a heat tunnel at 200 °C.

To be completed with side infill panels.

WORKTOP

With anti-overflow edges and standard tank (400 x 500 x 300 mm (H) or other dimensions on request. Wash surface with trap.

UNDERSINK UNIT

Structure and doors in waterproof chipboard covered with blue Class 1 fireproof HPL plastic melamine laminate.

Rounded shock-resistant edge in grey ABS, 3 mm thick.

Aluminium handles.

Steel support sprayed with epoxy resin powder and then placed in a heat tunnel at 200 °C.

Mounted on a base with height-adjustable feet.

ACCESSORIES

Swivel spout water tap for hot/cold water, waste bin, eyewash unit and plastic trap.

SERVICE OUTLET PANEL

ETA_SERIES

SERVICES ON VERTICAL PANEL

The ASEM® service outlet panel (available as an option) is ideal for hydraulic, electrical and technical gas distribution.

Ease of use and accessibility is the basis of achieving results by optimising space and time.

The vertical service outlet panel is ideal for wall-mounted benches and central islands.

The service outlet panel, 360 mm high, in sheet metal sprayed with epoxy powder is positioned above the worktop, side columns 740 mm high.

Fitting for taps, 28 mm diameter holes with removable plastic caps and electrical appliances with IP55-rated waterproof electrical boxes.

SERVICES FITTINGS

One of the strengths of ASEM® furniture is that it can be personalised with a wide range of accessories according to the users' requirements.

The service outlet bar and panel can be used to hold taps, power socket towers, switches and data points as well as technical gas valves, pressure reducers and emergency showers.

All this can be easily accessed on the worktop with the advantage of selecting the most suitable configuration even if the layout can also be subsequently modified and extended.

TAPS

Our range of taps complies with the most stringent standards.

They are made using brass pipe which is compliant with EN 12168 and solid brass rods which are compliant with EN 12164. Removable spout in accordance with the DIN 12898 standards.

The handwheels are made of acid-resistant polypropylene with a colour code that is compliant with the EN 13792 standard. Threading is compliant with ISO228/1, tolerance class B.

(Standard with 3/8" connection).

The taps comply with the DIN 12918 standard.

The water taps have a maximum pressure of 7 bar.

The taps have a 17 micron thick nickel internal lining for demineralised water.

The natural gas taps are tested at a pressure of 0.2 bar; they have a safety device and are DIN DVGW certified.

The technical gas taps are made with a fine regulation head in PTFE and have a maximum pressure of 7 bar.

The entire production process is ISO 9001:2015 certified.

ASEM[®] Laboratory Furniture
CEEN
13150

UNITS

ASEM[®] units are available in high quality laminate which guarantees excellent water resistance and durability.

It's detail that makes all the difference.

That is why we focus on detail and why even the smallest components are important in the development of technical laboratory furniture.

Attention to and research into materials, their shape and their practical qualities are vital to creating a high level work environment.

The world is full of colour and so can your laboratory!

You can choose the colour for the front you prefer from our range of colours and make your furniture even more unique.

UNITS

Structure and doors in waterproof chipboard with E1 classification for formaldehyde emissions, coated on both sides with CLASS 1 fire-retardant melamine plastic laminate with a scratch-resistant quartz finish consisting of phenolic resin-impregnated kraft paper sheets, a decorative blue* top layer (other colours are available on request) impregnated with melamine resin, subjected to the combined action of pressure and heat.

Rounded shock-resistant edge, 3 mm thick.

Doors with 168° hinge opening. Available in Class 0 version in steel sprayed with acid-resistant epoxy resin paint.

Drawers with sliding guides on ball bearings and anti-tilt end stops.

Aluminium handles. Steel support sprayed in epoxy resin powder with 4 swivel rubber wheels, 2 with a brake.

Undersink units on a base with height-adjustable feet.

EN16121 SEVERA certified by Bureau Veritas.

REINFORCED BENCH TABLES

Benches designed to bear heavy weights. Extremely strong and sturdy, they can bear a weight of 400 kg (CATAS certified). They have been designed to be functional and practical to move thanks to specially reinforced wheels.

Support structure in 50x50 mm pickled steel tube sprayed in epoxy resin powder in RAL 9010 Pure White (other colours available on request) and then placed in a heat tunnel at 180 °C.

Height-adjustable steel feet coated in acid-resistant plastic.

Available in widths of 900, 1200, 1500, 1800 mm and with a standard depth of 750 and 600 and 2 heights, 770 or 900.

TALL CABINETS

Structure with central partition and doors in waterproof chipboard with E1 classification for formaldehyde emissions, coated on both sides with CLASS 1 fire-retardant melamine plastic laminate with a scratch-resistant quartz finish consisting of phenolic resin-impregnated kraft paper sheets, a decorative white top layer (other colours are available on request) impregnated with melamine resin, subjected to the combined action of pressure and heat.

Rounded shock-resistant white edge, 3 mm thick.

Doors with 168° hinge opening to prevent contact with other doors if placed alongside but ensure that the entire internal surface area can be accessed with no obstructions.

Aluminium handles.

Sliding safety glass doors with silver aluminium track, trolleys with skids, adjustable-height shelves.

Steel bearing frame sprayed with epoxy resin powder and then placed in a heat tunnel at 180 °C.

Complete with height-adjustable feet.

METAL CABINETS

Made of 8/10 thick pressed sheet steel suitably reinforced with 12/10 mm elements, standard RAL7035 grey paint or other colours available on request.

The sides have a 40 mm back with rounded outside edges.

The sliding doors have a sliding system that uses galvanised rods with nylon-coated ball bearings.

Supplied with 4 height-adjustable shelves.

Tested in the CATAS® laboratory in compliance with UNI standards.

ACCIDENT PREVENTION SHOWERS AND EYEWASH UNITS

Built to comply with CE - DIN12899 - UNI9608 standards with a high water flow and gentle jet which can be used to wash parts of the body accidentally hit by harsh products immediately.

Essential in all high risk environments, they can be easily identified since they are red (or green if requested) and are specially marked in compliance with the regulations in force.
